OBJECTIVE

A position in CG Industry with special interests in R&D.

EDUCATION

Master Of Engineering, Majored in Computer Applied Technology, Graduated in 2007
Capital Normal University, Beijing, China.

Bachelor Of Engineering, Majored in Computer Science and Technology, Graduated in 2004
Henan University of Technology, ZhengZhou, Henan, China.

COMPUTER SKILLS

Languages: C/C++, Python, Shell, Perl, x86ASM

Operation Systems: Windows, Linux

Development Tools: MSVC, CodeBlocks, CMake, SVN/Git, Jude, MayaAPI/mel, OpenCollada, OpenGL/GLSL, OGRE, ODE, PhysX, Bullet, MASM

Graphics Tools: Maya, Blender, Photoshop

Others: Design Pattern

EXPERIENCE

Maya TD January 2015

PLE Department, **Base FX**

- Created the Maya C++ plugin development process, including the development, test and the plugin deployment.
- In order to support different Maya versions and different platforms, I created the automation build process and automation test process which saves a lot of time for building, testing and plugin deployment.
- Developed a tool which can make blendshape with partial points of a mesh.
- Improved a tool which can use make blendshape with dual-quaternion parameter in Maya.
- Developed a tool for film *Star Wars Episode VII* project.
- Maintained Maya Alembic export plugin.
- Developed several SOuP nodes.

Software Engineer September 2013

R&D Department, **ShangHai CudaTec Technology Development Limited Company**

- Designed, implemented and tested a product-quality Maya plug-in. This plugin can translate the following data to renderer: Geometry(polygon/nurbs/subdiv/particle/nparticle/hair), Instance, Light(point/area/ directional/spot/mesh light/user-defined light), Most of Maya internal render nodes(surface shader/displacement shader/shading group/texture/utility and etc), User-defined shader, ShaderGraph, Rendering mode(interactive/IPR/Batch/swatch rendering), AOV.
- Responsible for planning, design, development, collaboration, code review, testing and release. Used agile methodologies in this project development: continuous integration, test-driven development, unit testing and automation testing. And took the responsibility for releasing the package from alpha1 to alpha5.

- Constructed and maintained the code repository server for the team.
- Provided services for test clients and users.

Software Engineer

June 2012

Production Department, **Geodo Space Information Technology Limited Company**

- Developed a tornado particle effect for *OSG* engine.
- Trimmed *ossim* which is a third-party library for our engine.

Software Engineer

March 2011

3D Graphics Department, **Institute of Automation Chinese Academy of Sciences**

- Developed a 3D virtual world based on *RealXtend* with the integration of *Kinect*, *OgreHaptics*, fluid surface construction and UI localization.
- Integrated Blender's GPU renderer *Cycles* with parallel rendering middle-ware *Equalizer*.

Technical Director

July 2009

Technical Support Department, **Xing-Xing Digital Corporation**, Beijing

- Developed the core module of lip-sync plug-in for Maya. (This plug-in has been registered as the proprietary with the software copyright registration ID 0183406)
- Developed a product-quality Maya to 3ds format translator for *Redboard Ltd.*
- Developed a rigid/soft body dynamic system for Maya based on *Bullet Physics Engine*.
- Developed a procedural texture which projects the inner region of a closed NURBS to a texture.
- Optimized the modules in pre-check process, and saved 80% time for that process.
- Implemented the core module in the paper: *A System to Reuse Facial Rigs and Animations*.
- Parsed Maya Geometry Cache(*.mc) format and Maya Particle Cache(*.pdc) format.
- Maintained *LiquidMaya*.
- Designed and deployed the SVN server, and developed the backup/restore scripts for the SVN server.

Software Engineer

September 2008

System Department, **Tuya Software Corporation**, Beijing

- Participated in the development of TUYA World II which is a 3D virtual world on-line game.

Software Engineer

September 2007

Software Development Department, **China Academy of Space Technology**

- Participated in the testing process.

Software Engineer(intern)

March 2007

R&D center of Notebook Computer, **Lenovo**, Beijing

- Developed a 3D mini-game for exhibiting the gravity system in *Lenovo's* laptops.

RESEARCH

Master's Thesis:

- *Research and implementation of the 3D operation in virtual environment*

Implementation of the academic paper:

- *A System to Reuse Facial Rigs and Animations*

OPEN-SOURCE PROJECTS

- MyMagicBox (<https://github.com/yaoyansi/mymagicbox>)
Role: Creator
Miscellaneous projects for exercises.
- Maya2renderer(<https://github.com/maya2renderer/maya2renderer>)
Role: Creator
Based on *LiquidMaya*, this project aims to provide a framework to translate Maya data to a renderer. It supports *3Delight*, *Elvishray* and *Appleseed* now.
- MayaExporter(<http://code.google.com/p/mayaexporter/>)
Role: Creator
An experimental project which aims to provide a framework to export Maya data to a renderer. This project is refactored from *ColladaMaya*..
- GPExporter(<http://code.google.com/p/gpexport/>)
Role: Developer
A light-weight exporter for Maya, and I fixed some bugs and did some optimization.
- Simple Cloth Simulation (<http://blog.csdn.net/yaoyansi/archive/2007/09/05/1774002.aspx>)
Role: Creator
Implemented the Mass-Spring module for cloth simulation. Developed an algorithm for computing a general polyhedron's volume. This algorithm is mentioned in *Game Development Gems 6*.
- OpenCollada(<http://code.google.com/p/opencollada/>)
Role: Developer
Simplified the 3ds export process with *lib3ds* library and fixed some bugs.
- GPUSPHsim (<http://code.google.com/p/gpusphsim/>)
Role: Developer
Implemented the fluid surface construction using Meta-ball algorithm.
